

SUMMARY

Performance in the Real Sector

The effects of COVID-19 pandemic continued to be felt in the first quarter of 2021 albeit with various countries witnessing a recovery trajectory from the fourth quarter of 2020 with reopening of economies. The global economy is estimated to have contracted by 3.30 per cent in 2020. Advanced economies contracted by 4.70 per cent and emerging markets and developing economies by 2.20 per cent. Kenya's economy was projected to have contracted by 0.30 per cent in 2020.

The overall inflation in Kenya in the first quarter of 2021 averaged 5.71 per cent compared to 6.26 per cent in the same quarter in 2020. Inflation increased mildly from a low of 5.69 per cent in January to 5.90 per cent in March 2021. Food and non-alcoholic beverages were the major contributors to overall inflation, followed closely by fuel. It is expected that food inflationary pressures will ease with the anticipated long rains in the months of March to May. Fuel inflation increased gradually mainly because of increase in local pump prices as the world crude oil prices continued with an upward trend.

International Market

Production, exports and prices of tea and coffee continued to follow the seasonal patterns depicted in previous years. In the period January to March 2021, the Kenya shilling (Ksh) depreciated by 0.27 per cent and 1.09 per cent against the US Dollar and Sterling Pound, respectively. However, the Kenyan shilling appreciated by 4.15 per cent against the Euro. Kenya maintained an average of 4.70 months of import cover, even though there was a downward trend in the months of import cover from 4.90 in January 2021 to 4.50 in March 2021. It is expected that the situation will improve further with disbursements on the recently approved arrangement with IMF.

Monetary and Financial Sector

The Central Bank of Kenya maintained an accommodative monetary policy stance, with the policy rate maintained at 7.00 per cent to support the recovery of economic activities. Similarly, most Central Banks in the region maintained accommodative monetary policy stance to stimulate economic activities. The 91-day, 182-day and 364-day Treasury bills' interest rates increased from 6.91 per cent, 7.40 per cent and 8.35 per cent in January 2021 to 7.09 per cent, 7.89 per cent and 9.26 per cent in March 2021, respectively. Both the value and the number of transactions have reduced in January 2021 compared to the preceding months, an aspect attributable to the resumption of transaction costs for mobile phone transactions above Ksh 100. Non-performing loans took an upward trend as expected with the slowed economic activity while growth in private sector credit slowed.

Fiscal Performance

The cumulative actual national revenue receipts as of 31st March 2021 totaled Ksh 1172.7 billion compared to a total of Ksh 1,345.77 billion in March 2020, a decrease of 14.76 per cent. The actual revenue for quarter one in 2020 was Ksh 669.23 billion compared to a quarterly target of Ksh 707.61 billion. The exchequer allocation for development expenditure to the Ministry of Health as a percentage of total issues to Ministries,

Departments and Agencies (MDAs) increased from a quarterly average of 5.70 per cent in quarter one of 2020 to 19.40 per cent in quarter one of 2021. This is attributable to the continued government efforts to support the health sector in combating the COVID-19 pandemic. The recurrent allocation of the sector as a percentage of total issues also increased to 5.06 per cent in quarter one of 2021 from 3.78 per cent of the corresponding quarter in 2020.

Public debt increased to Ksh 7.35 trillion in March 2021 with increased borrowing related to the COVID-19, of which about 48.89 per cent was domestic debt. In the first quarter of 2021, the proportion of domestic debt held in treasury bonds rose to 75.82 per cent from 67.67 per cent in a similar quarter in 2020.

Capital Markets

As the confirmed COVID-19 cases continue to be registered globally, the world stock markets registered fluctuating trends in 2020. However, following the reopening of economies and the resumption of businesses, US, European, and Asian stock markets registered upward trends since October 2020 and this trend has extended to the first quarter of 2021, implying that the afore markets are slowly growing resilient to COVID-19. The stock market in Kenya has also taken a declining trend since January 2020, occasioned by declined foreign investor participation. However, in the fourth quarter of 2020, the stock market showed a steady recovery, which continued to the first quarter of 2021 despite the third wave of COVID-19 pandemic. This is attributable to increased economic activities following the reopening of the economy. The 10-year Kenya Eurobond (2024) yield continued to decline in the first quarter of 2021, an indication that the international market is slowly regaining confidence with Kenya's creditworthiness.

Risk-related Factors

The Purchasing Managers' Index (PMI) for Kenya has dropped from a high of 53.20 in January 2021 to a low of 50.60 in March 2021, although it remains above the 50-threshold. This signals a notable deterioration in the private sector and health of the economy. The country recorded an average rainfall of 491.70mm and 277.50mm in March-May and June-August 2020, respectively, which was higher than that recorded in the previous year. However, October to December 2020 short rains were lower (201.60mm) compared to a similar season in 2019 (584.40mm). This contributed to increased prices of food in the fourth quarter of 2020 and the first quarter of 2021. The anticipated March to May short rains are expected to push food prices downwards. In terms of credit rating for Kenya, the March 2021 fitch rating indicates a negative outlook for long term issuer default rating and local currency long-term issuer default rating. The country's economic growth is likely to be challenged by the third wave of COVID-19 that kicked off in the first quarter of 2021.
